

### **Second material support: How to choose dataset**

1. What are his advice on choosing dataset? in your own word briefly describe those main points.
  - a. Real life datasets: the data need to be realistic
  - b. Easy to understand: find the data which are not complicated. It has to be understandable for a general audience.
  - c. Data cleansing: choose the data which you are able to clean as data cleansing an important work of data analysts.
2. How are you going to apply his idea into your task of choosing dataset for your project?
  - a. Go through the examples of data sources and types that he showed
  - b. Pick the data that I can easily relate to so that I can get the glimpse of the datasets quickly.
